Stainless Steel Products

Cleaning:

Daily Cleaning: Clean the product with a soft cloth or sponge using warm soapy water. Then rinse with clean water and dry thoroughly.

Stain and Fingerprints: When encountering fingerprints or stains, clean them using a small amount of vinegar or stainless steel cleaner. Use a soft cloth to avoid damaging the steel surface during this process.

Choosing the Right Cloth: When cleaning stainless steel surfaces, make sure to use soft microfiber or cotton cloths. Avoid using hard or abrasive materials, as they can cause scratches. Clean the surface with the cloth of your choice, following the pattern in a vertical direction.

Protection:

Maintaining Shine: To keep the stainless steel surface shiny, use special stainless steel polish or oil-based polishes.

Protection Against Scratches: Avoid sharp or hard objects, and be careful not to scratch the product during use. Stainless steel is resistant to scratches, but excessive force or sharp objects can cause scratches.

Caution!

Avoid Acidic and Abrasive Substances: Stainless steel should not come into contact with acidic or abrasive cleaning agents.

Prevent Prolonged Contact: Avoid prolonged contact of stainless steel products with wood or other metal objects.

Galvanized Powder-Coated Steel Products

Cleaning:

Daily Cleaning: Use a soft cloth or sponge with warm soapy water to clean the product. After cleaning, rinse thoroughly, and dry gently with a dry cloth.

Cleaning Stain or Dirty Areas: You can use a mild cleaning agent or detergent. However, avoid abrasive cleaners as they can damage the surface of the electrostatic paint.

Use a Soft Cloth or Sponge: Avoid using hard or abrasive materials to clean electrostatic painted surfaces. Use a soft microfiber cloth or a soft sponge.

Protection:

Prevent Scratches: Avoid sharp or hard objects when cleaning or handling the product. While it is resistant to scratches, excessive force can cause them.

Sunlight and Weather Conditions: Avoid exposing electrostatic painted products directly to sunlight or extreme weather conditions. These situations can lead to color fading and damage to the paint.

Caution!

Chemical Contact Measures: Avoid using abrasive or chemical-containing cleaners, as they can affect the quality of the electrostatic paint. Always refer to the product instructions when using special cleaning agents.

Protective Coating: When storing or transporting electrostatic painted products for an extended period, provide protection against scratches by using protective coatings or covers.

Powder-Coated Steel Products

Cleaning:

Daily Cleaning: Use a soft cloth or sponge with warm soapy water to clean the product. After cleaning, rinse thoroughly, and dry gently with a dry cloth.

Cleaning Stains or Dirty Areas: You can use a gentle cleaning agent or detergent. However, avoid abrasive cleaners as they can damage the painted surface.

Use a Soft Cloth or Sponge: Avoid using hard or abrasive materials to clean electrostatic painted surfaces. Use a soft microfiber cloth or a soft sponge.

Protection:

Prevent Scratches: Avoid sharp or hard objects when cleaning or handling the product. While it is resistant to scratches, excessive force can cause them.

Sunlight and Weather Conditions: Avoid exposing electrostatic painted products directly to sunlight or extreme weather conditions. Also, refrain from allowing your product to come into contact with water. These conditions can lead to color fading and damage to the paint.

Caution!

Chemical Contact Measures: Avoid using abrasive or chemical-containing cleaners, as they can affect the quality of the electrostatic paint. Always refer to the product instructions when using special cleaning agents.

Protective Coating and Maintenance Products: To protect the painted surface, use special protective coatings or maintenance products. This can contribute to the longevity of your product.
