

ECOBIN is a metal waste basket designed for indoor sorting and collection of recycling and general waste. It has a simple appearance achieved by being lightened with minimal detail solutions and minimum material use in its design.

## Features

Ecobin product has one compartment. With different cover colours and customisable waste icons, it is suitable for side by side use according to your needs. Each compartment has 80 litres.

Waste/recycle basket. It is produced by applying powder coated steel on metal and expanded metal material. It is used with the standard garbage bag. The metal cover prevents the bag from slipping and hides the appearance of the bag protruding from the edges. Waste icons and writings are applied by cutting them on the cover.

The use of the product is as follows; product's lid on the top opens backwards and attached waste bags on the inner buckets can be easily emptied and new bags can be inserted into the bucket. Product can be cleaned by wiping with a damp cloth.

The waste disposal hole is open on the metal cover. Waste icons and writings are applied by cutting them on the cover. Optional logo application is made on the cover.

The metal cover is removed by lifting and the garbage bag is removed, the new bag is attached to the basket and the cover is placed on the basket.

It has a bowl base that holds any liquid that may seep into the basket floor.

Steel material is used in its design, which can be reused many times. The entire product is suitable for recycling. It is designed in such a way that minimal waste and wastage occur in its production. Ecobin design is unique. It was designed by industrial product designer Yasemin Köse. The design of Ecobin products is registered under the Turkish Patent and Trademark Office.

# To create a order;

1. Determine the waste label and color for the product.
