ABOUT US

ROKA has been established as a brand introduces design products and services for the better environment. Roka believes waste is equal source. Greenbin was presented as our first collection of recycling units in 2009 and gained the appreciation of many corporate firms. Our company, which continues to develop services and products in the field of environment, continues to develop all creative solutions by combining all these efforts and experiences in 2016 under the ROKA roof as a specialized brand in the sector. Our vision, innovative, responsible and responsive approach to Turkey and the world standard is to produce environmentally friendly products.

SUSTAINABILITY

ROKA cares about contributing to the continuity of mankind and nature harmony by respecting both today's and tomorrow's needs for a sustainable environment. ROKA offers healthier and environmentally friendly products to future generations with its respectful and responsible approach to the environment and social life. Moreover, ROKA designs all its products for recycling and long lasting. In addition, ROKA follows a political line which is minimal waste and wastage in its production process, for this reason, it targets the highest quality level in every product.

OUR SERVICES

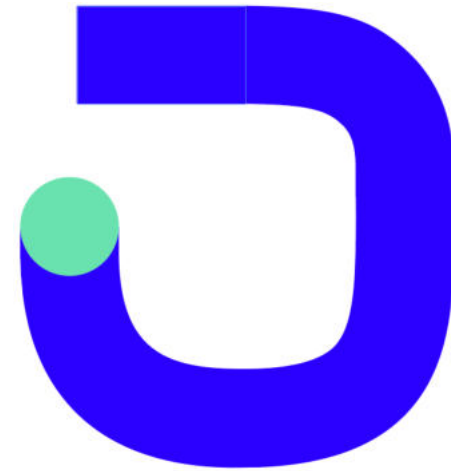

ROKA designs and realizes products with over ten years experience in the waste management field. ROKA is your solution partner which develops customized solutions when needed.

ROKA develops projects for the institutions which are willing to increase their visibility in waste and environment fields and to create awareness and consciousness in the society.

Three Compartment Recycling Unit
Stainless Steel

GREENBIN

Recycling Units

GREENBIN recycling units preferred by respected institutions for recycling since 2009, offers a sustainable experience with long lasting, functional and aesthetic advantages with a wide product family.

Product Information

There is a locked cover on the back of the product. The cover is opened with the key and the waste bags inside the product are emptied.

There is a base with a reservoir inside the product where liquid wastes can accumulate.

Waste types are classified with waste labels specially designed for Greenbin.

Thanks to the bag hanger system which can be used with the standard bags, it does not require extra inner bucket.

It has brake wheel.

Material

Stainless Steel 304 Quality or
Electrostatic Painted Steel
